

# Test of sirens warning the population

20th March 2013

84 sirens installed in 37 municipalities in Catalonia will sound so that everybody gets to know the sound of the warning systems and how to react in a real case

For further information, visit:  
[www.gencat.cat/interior/riscquimic](http://www.gencat.cat/interior/riscquimic)

 @emergenciescat

The alarm will sound by means of the sirens: three signals of one minute, each separated by five seconds of silence

The end of the test of sirens will be announced with a continuous 30-seconds signal

When affected by an accident, the alert will be declared: the alarm will sound by means of the sirens.

In a real situation, you should follow these advices:

### Stay inside behind closed doors and windows

If you are in the street, take shelter inside the nearest building. Turn off all air-conditioning devices.

### Get informed

Tune in your local radio station or a station broadcasting news. Follow the instructions on the twitter @emergenciescat.

### End of the alert

It will be announced also by means of the sirens and on the radio. It is a continuous 30-second signal.
